DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group III, claims 14-19, in the reply filed on July 3, 2007 is acknowledged.
2. Claims 1-13 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on July 3, 2007.

Claim Rejections - 35 USC § 112

3. Claim 14 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. Particularly, the preamble of the claim refers to a system, but the body of the claim includes a logic performing a step.
5. Also, it is unclear whether the logic is hardware or software.

Claim Rejections - 35 USC § 101

6. 35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

7. Claim 1 is rejected under 35 U.S.C. § 101 because the claimed invention is directed to non-statutory subject matter.

35 USC 101 requires that in order to be patentable the invention must be a "new and useful process, machine, manufacture, *or* composition of matter, *or* any new and useful improvement thereof" (emphasis added). The applicants claims mentioned above are intended to embrace or overlap *two* different statutory classes of invention as set forth in 35 USC 101. The claim begins by discussing a tester but subsequently the claims then deal with the specifics of a method (i.e. logic executing a process). "A claim of this type is precluded by the express language of 35 USC 101 which is drafted so as to set forth the statutory classes of invention in the alternative only", Ex parte Lyell (17 USPQ2d 1548).

8. Claims 14-19 have been examined.

Claim Rejections - 35 USC § 102

9. Claims 14-19 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 7191368 to Organ et al. ("Organ").

Referring to claim 14, Organ discloses a tester to apply to one or more testes to a device (see abstract – an electronic tester; a test head is coupled to a device under test), logic, communicatively coupled to the tester, to enable one or more resources of the tester according to one or more properties of an electronic license (i.e. rule) (see col. 12, lines 4-6) and to create at

Art Unit: 3621

least one log file having resources use information for one or more tests executed on the tester (see col. 14, lines 46-50).

Referring to claims 15-18, Organ discloses the system wherein the logic is to enable an amount of memory available on the tester according to one of the properties of the electronic license (i.e. attribute), to enable a speed available on the tester (i.e. timing information) according to one of the properties of the electronic license, to enable a number of waveforms available on the tester according to one of the properties of the electronic license and to enable a number of edge transactions available on the tester (i.e. attribute) according to one of the properties of the electronic license (see col. 12, lines 4-8).

Referring to claim 19, Organ discloses the tester comprises a system-on-a-chip tester (see abstract, lines 1-4).

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- US Publication No. 2003/0046238 to Nonaka et al. discloses data processing apparatus, data processing system, and data processing method therefor.
- JP Publication No. 2001-265588 to Ishihara discloses software license managing system and recording medium with software license managing program recorded thereon.
